OSTRYNSKA KATERYNA

Junior Front-End developer

Passionate and motivated Front-End developer from Ukraine looking for a full-time position in a stable company with a team of positive developers. I studied the following technologies: HTML, CSS, and JavaScript. I have some experience in creating own and command projects. Currently learning TypeScript and NodeJs. So, I push myself by learning new things and taking up challenges.

- JavaScript Es6+
- REST API
- Parcel
- Agile/Scrum

SOFT SKILLS

- Conscientious
- Self-Motivation
- Assiduous
- Flexible

LANGUAGES

- Ukrainian: Native
- English: Intermediate

PROJECTS

1. **PrimeChat**   Link   [React/Redux/Adaptive design]
   Demo real-time chat application project to learn Socket.io (full stack chatting app). The application is built using React, Node.js, uses Socket.io for real-time communication, and stores user details in encrypted format in Mongo DB Database.

2. **Social media App**   Link   [React Native/Redux/Firebase]
   Cross-platform (iOS and Android) social media mobile App. Allows registered users to create posts, comments, "like" posts and view the location where the photo was taken on the map. Logic has been added so that the author can take a photo or add photos from the smartphone library.

3. **Recipes - So Yummy**   Link   [React/Redux/Adaptive design]
   Team project, role: developer. "What to cook?" is not only an adaptive recipe app, it is, in fact, your cookbook. You can add your own recipes to save them for the future. I managed to work on the registration and login pages with appropriate form validation, as well as on project page routing.
